Nederlandse Keramische Vereniging

## Advanced Ceramic Manufacturing in the Benelux

### Call for contributions

On **Friday 25 October 2024**, the Netherlands Ceramic Society (NKV) and our Belgian sister organization, the Belgian Ceramic Society (BCerS), assisted by the Young Ceramists Network (YCN) organize a one-day symposium on 'Advanced Ceramic Manufacturing in the Benelux' at Eindhoven University of Technology.

The aim is to bring together people from universities, research institutes and industry involved in advanced ceramic manufacturing from the Netherlands, Belgium, Luxemburg (and Germany).

Examples of topics to be discussed during this symposium are:

- 3D printing
- Binder jetting
- Advanced coating techniques
- Forming methods like injection moulding, freeze casting, etc.

Young researchers (PhD students, post-docs, tenure tracks and starters at companies) are especially invited to give a contribution, either as oral or poster presentation. Besides, we offer companies and research institutes to give a table top (product) presentation.

### Program:

Several oral presentations are planned, while ample time will be scheduled for networking, poster and table top presentations.

The program will be filled-out in the coming months.

Attendees who want to submit an oral or poster presentation are kindly invited to submit title and abstract to [info@ceramics.nl](mailto:info@ceramics.nl) (deadline: September 15). Companies/institutes that are interested in giving a table top presentation during this event can contact the organising committee for further information via the same email address.
